

TRAFFIC SAFETY RESEARCH

AN INTERDISCIPLINARY JOURNAL

Traffic Safety Research (TSR) interdisciplinary journal promotes publication of innovative research within engineering, psychology, sociology, medicine and other related fields.

Proactive methods and analyses as well as multidisciplinary views on the traffic safety problems are encouraged.

TSR journal topics cover (but not limited to):

- in-depth exploration and causal explanation of accident mechanisms;
- behaviour and attitudes in traffic related to safety;
- safety of specific groups in traffic;
- medical, economical, psychological and other consequences of accidents;
- methodological development;
- system analysis and policy;
- development and evaluation of safety counter-measures;
- state-of-the art knowledge summaries and literature reviews.

The main criteria in selection of papers for the publication are novelty, scientific excellence and contribution to practical knowledge within traffic safety.
